Brainstorm & Idea Prioritization – Project Documentation

Date	9 February 2026
Team ID	LTVIP2026TMIDS36203
Project Name	Strategic Product Placement Analysis: Unveiling Sales Impact with Tableau Visualization
Maximum Marks	4 Marks

Step-1: Team Collaboration & Problem Definition

The team gathered to analyze how product positioning influences sales performance and customer behavior in retail environments. It was observed that companies often rely on raw sales reports and lack interactive visual tools to clearly understand which product placements drive higher revenue.

Through collaborative discussion and data analysis, the team identified the need for a visual analytics solution that can transform raw retail data into actionable insights.

Problem Statement:

Retail companies struggle to clearly understand the impact of product placement (endcap, aisle, shelf) on sales performance and consumer behavior. Existing raw reports are difficult to interpret and do not provide actionable insights. A centralized and interactive Tableau-based visualization system is needed to analyze product positioning effectiveness and support data-driven marketing decisions.

Step-2: Brainstorming and Grouping Ideas

The team explored multiple approaches to solve the defined problem. Ideas were discussed and grouped based on feasibility and effectiveness.

Idea	Description	Group
Static Excel Reports	Analyze sales using Excel charts	Traditional Methods

Basic BI Dashboards	Use simple charts without deep interaction	Semi-Digital Tools
Python Visualization	Build custom plots using Python libraries	Semi-Digital Tools
Tableau Interactive Dashboard	Build dynamic visual analytics dashboard	Automated Solutions

Step-3: Idea Prioritization

Each idea was evaluated based on **impact** and **implementation effort**.

Idea	Impact	Effort	Priority	Remarks
Static Excel Reports	Low	Low	Low ✖	Limited Insights
Basic BI Dashboards	Medium	Low	Medium ✖	Less interactivity
Python Visualization	Medium	High	Medium ✖	More development time
Tableau Interactive Dashboard	High	Medium	✔ High	Best balance of feasibility and value

Conclusion

Based on structured brainstorming and prioritization, the team concluded that developing an **interactive Tableau dashboard** is the most effective solution for analyzing product placement impact. The solution provides clear visual insights, supports data-driven decision-making, and helps retail businesses optimize product positioning strategies to improve sales performance.
