Maximum Marks	4 Marks

Empathy Map Canvas

An empathy map is a clear and visual tool that captures insights into stakeholders' behaviors, needs, and challenges while analyzing sales performance and product placement strategies. In this project, *Strategic Product Placement Analysis: Unveiling Sales Impact with Tableau Visualization*, the empathy map plays a crucial role in helping the team understand the real difficulties faced by retail managers and decision-makers who rely on sales data to optimize product positioning. Many stakeholders struggle with scattered spreadsheets, unclear reports, and limited visibility into which placements truly drive revenue growth. Creating an effective analytical solution requires deeply understanding their goals — such as increasing sales, maximizing shelf visibility, and making data-driven decisions — along with their frustrations, including lack of visual clarity, time-consuming manual analysis, and difficulty identifying trends. By building this empathy map, we are able to see the situation from the stakeholders' perspective and identify gaps in the current reporting process. This understanding guides the development of an interactive and intuitive Tableau dashboard that simplifies complex data, highlights key performance insights, reduces decision-making delays, and enables strategic product placement to improve overall sales impact.
