

Project Design Phase
Problem – Solution Fit

Date	15 February 2026
Team ID	LTVIP2026TMIDS36203
Project Name	Strategic Product Placement Analysis: Unveiling Sales Impact with Tableau Visualization
Maximum Marks	2 Marks

Overview

The project addresses a common and recurring challenge faced by retail businesses—scattered and fragmented sales data that makes it difficult to evaluate product placement effectiveness. Retail managers often rely on disconnected Excel files and manual reporting methods, which result in inconsistent analysis, delayed insights, and poor decision-making.

The proposed solution—an interactive Tableau dashboard integrated within a centralized system—directly solves this problem. By consolidating sales data into a single visual analytics platform, the system enables real-time insights, automated data processing, and dynamic filtering. This structured visualization approach ensures accurate analysis, better comparison of performance metrics, and informed product placement strategies.

Purpose and Benefits

-  **Solves a Real Problem:** Addresses fragmented and unclear sales data that prevents businesses from understanding which product placements drive revenue growth.
-  **Improves Data Analysis:** Uses interactive Tableau dashboards with filters and visual comparisons to simplify complex sales data.
-  **Enhances Decision-Making:** Allows managers to quickly identify top-performing and underperforming products for better strategic planning.
-  **Increases Efficiency:** Reduces dependency on manual Excel reporting and saves time through automated data visualization.
-  **Provides Real-Time Insights:** Centralizes data into a dynamic dashboard, enabling faster and more accurate business decisions.

Sales Impact with Tableau Visualization Maximum Marks: 2 Marks

KNOW YOUR CUSTOMER?

Retail managers and business analysts who need accurate actionable sales insights to optimize product placement.

**EXPLORE LIMITATIONS
TO BUY / USE**

Stakeholders work with disconnected data sources, struggle with manual Excel reporting, and lack real-time visual insights.

**HOW ARE YOU
GOING TO BE DIFFERENT?**

By centralizing data visualization within an interactive Tableau dashboard embedded in a Flask web app, we provide clear, real-time insights.

**BANK ON FREQUENT,
IMPORTANT, OR URGENT
NEEDS TO SOLVE**

Retailers need to quickly identify top-performing and underperforming product placements for boost sales.

PROBLEM – SOLUTION FIT

Many retailers struggle with scattered, unclear sales data that make it difficult to understand which product placements are driving revenue growth.

**WORKING WITH FRAGMENT,
DATA IN SEPARATE FILES**

Working with fragmented data in separate files makes it hard to spot trends, track performance, and drive effective product placement strategies.

SOLVES A REAL PROBLEM

- ✓ Centralizes sales data into interactive Tableau dashboards for clear and actionable insights.

IMPROVES DATA ANALYSIS

- ✓ Uses automated data processing, interactive visuals, and filters to simplify sales analysis and highlights.

**ENABLES STRATEGIC
DECISION-MAKING**

- ✓ Allows users to quickly pinpoint opportunities, compare performance metrics, and

✓ SOLVES A REAL PROBLEM

- ✓ Centralizes sales data into interactive Tableau dashboards for clear and actionable insights.

✓ IMPROVES DATA ANALYSIS
